terrà un seminario dal titolo:

**Nonexistence of positive solutions for
differential inequalities with a
potential on Riemannian manifolds**

Abstract:

In this talk I will present some recent developments concerning nonexistence results for nonnegative, nontrivial weak solutions for a class of quasilinear elliptic and parabolic differential inequalities with a potential both on R^m and on complete, noncompact Riemannian manifolds, obtained in collaboration with P. Mastrolia (Università degli Studi di Milano) and F. Punzo (Università della Calabria).

In particular, we investigate the interplay between the geometry of the underlying manifold, the (power) nonlinearity and the behaviour of the potential at infinity in obtaining nonexistence of nonnegative solutions, while at the same time trying to keep the hypotheses on the geometry of the manifold at a minimum.
