# Logica Proposizionale Propositional Logic

Wolfgang Faber

University of Calabria, Italy

2007

#### Outline of Part I

- History
- 2 Syntax
  - Intuition
  - Syntax Definition
  - Equivalent Definitions
  - Examples
  - Convenient Notation
  - Formula Structure
- Semantics
  - Meaning of a Formula
  - Truth Valuations
  - Interpretations
  - Models

#### Outline of Part II

- Properties
  - Validity, Satisfiability
  - Equivalence
  - Entailment
  - Validity, Equivalence, Entailment as (Un)Satisfiability
- Normal Forms
  - Why Normal Forms?
  - Conjunctive Normal Form
  - Disjunctive Normal Form
- 6 Computation

#### Part I

History, Syntax, Semantics

#### Roots of Logic

- Greece (Aristotle, Euclid of Megara [not Alexandria!])
- India (Nyaya school)
- China (Mo Zi)

all between 400BC - 100BC

#### Continuation

- Arab and Islamic Logicians
- Scholastic Logic

#### Formal Logic

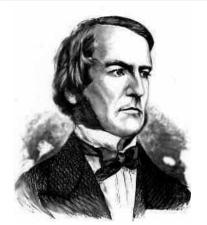

Gottfried Wilhelm von Leibniz (1646–1716) ⇒ "Calculus Ratiocinator"

#### Formal Logic

Augustus de Morgan (1806–1871) ⇒ "Logic as Algebra"

#### Formal Logic

George Boole (1815–1864) ⇒ "Symbolic Logic," "Truth Values"

Formula Structure

#### Propositional Logic – Intuition

- Assume basic statements (propositions) to be given.
- Make formulas out of them using a fixed set of connectives.
- Truth of propositions determines truth of formulas.

#### Propositional Logic – Intuition

- Assume basic statements (propositions) to be given.
- Make formulas out of them using a fixed set of connectives.
- Truth of propositions determines truth of formulas.

#### Propositional Logic – Intuition

- Assume basic statements (propositions) to be given.
- Make formulas out of them using a fixed set of connectives.
- Truth of propositions determines truth of formulas.

- Countable set V of propositional variables
- Example: {*A*, *B*, *C*, *D*, *A*<sub>0</sub>, *A*<sub>1</sub>, . . . }
- Important: No fixed meaning is associated to them!
- Propositional variables can mean anything.
- Truth value of variables fixed by semantics lateron.

- Countable set V of propositional variables
- Example: {*A*, *B*, *C*, *D*, *A*<sub>0</sub>, *A*<sub>1</sub>, . . . }
- Important: No fixed meaning is associated to them!
- Propositional variables can mean anything.
- Truth value of variables fixed by semantics lateron.

- Countable set V of propositional variables
- Example: {*A*, *B*, *C*, *D*, *A*<sub>0</sub>, *A*<sub>1</sub>, . . . }
- Important: No fixed meaning is associated to them!
- Propositional variables can mean anything.
- Truth value of variables fixed by semantics lateron.

- Countable set V of propositional variables
- Example: {*A*, *B*, *C*, *D*, *A*<sub>0</sub>, *A*<sub>1</sub>, . . . }
- Important: No fixed meaning is associated to them!
- Propositional variables can mean anything.
- Truth value of variables fixed by semantics lateron.

- Define the set  $F_V$  of propositional formulas or well-formed formulas (wff) for a set of propositional variables V.
- Inductive definition!
- A propositional variable is a wff: If  $v \in V$  then  $v \in F_V$ .
- Propositional variables are called atomic formulas
- Also: (propositional) atoms

- Define the set  $F_V$  of propositional formulas or well-formed formulas (wff) for a set of propositional variables V.
- Inductive definition!

Examples
Convenient Notation
Formula Structure

- $\top$  (verum) is a wff:  $\top \in F_V$
- $\perp$  (falsum) is a wff:  $\perp \in F_V$
- ⊤ and ⊥ will have a fixed meaning.
- ⊥ is always false.

Intuition
Syntax Definition
Equivalent Definitions
Examples
Convenient Notation
Formula Structure

- $\top$  (verum) is a wff:  $\top \in F_V$
- $\perp$  (falsum) is a wff:  $\perp \in F_V$
- ⊤ and ⊥ will have a fixed meaning.
- ⊥ is always false.

- $\top$  (verum) is a wff:  $\top \in F_V$
- $\perp$  (falsum) is a wff:  $\perp \in F_V$
- ⊤ and ⊥ will have a fixed meaning.
- ⊥ is always false.

- $\top$  (verum) is a wff:  $\top \in F_V$
- $\perp$  (falsum) is a wff:  $\perp \in F_V$
- ¬ and ⊥ will have a fixed meaning.
- ullet T is always true.
- ⊥ is always false.

- $\top$  (verum) is a wff:  $\top \in F_V$
- $\perp$  (falsum) is a wff:  $\perp \in F_V$
- ¬ and ⊥ will have a fixed meaning.
- ullet T is always true.
- $\bullet$   $\perp$  is always false.

#### Negation

- If P is a wff, then  $(\neg P)$  is a wff.
- If  $P \in F_V$ , then  $(\neg P) \in F_V$ .
- $(\neg P)$  should always have the opposite truth value of P.
- Note: P is a meta-symbol, and as a symbol not a wff, but a placeholder for a wff.

#### Negation

- If P is a wff, then  $(\neg P)$  is a wff.
- If  $P \in F_V$ , then  $(\neg P) \in F_V$ .
- $(\neg P)$  should always have the opposite truth value of P.
- Note: P is a meta-symbol, and as a symbol not a wff, but a placeholder for a wff.

#### Negation

- If P is a wff, then  $(\neg P)$  is a wff.
- If  $P \in F_V$ , then  $(\neg P) \in F_V$ .
- $(\neg P)$  should always have the opposite truth value of P.
- Note: P is a meta-symbol, and as a symbol not a wff, but a placeholder for a wff.

- If P and Q are wffs, then  $(P \land Q)$  is a wff.
- If  $\{P,Q\} \subseteq F_V$ , then  $(P \land Q) \in F_V$ .
- $(P \land Q)$  should be true if both P and Q are true.
- Note: *P* and *Q* can be equal! *P*, *Q* are meta-symbols.

- If P and Q are wffs, then  $(P \land Q)$  is a wff.
- If  $\{P,Q\} \subseteq F_V$ , then  $(P \land Q) \in F_V$ .
- $(P \land Q)$  should be true if both P and Q are true.
- Note: P and Q can be equal! P, Q are meta-symbols.

- If P and Q are wffs, then  $(P \land Q)$  is a wff.
- If  $\{P,Q\} \subseteq F_V$ , then  $(P \land Q) \in F_V$ .
- $(P \land Q)$  should be true if both P and Q are true.
- Note: P and Q can be equal! P, Q are meta-symbols.

- If P and Q are wffs, then  $(P \land Q)$  is a wff.
- If  $\{P,Q\} \subseteq F_V$ , then  $(P \land Q) \in F_V$ .
- $(P \land Q)$  should be true if both P and Q are true.
- Note: P and Q can be equal! P, Q are meta-symbols.

#### Disjunction

- If P and Q are wffs, then  $(P \lor Q)$  is a wff.
- If  $\{P,Q\} \subseteq F_V$ , then  $(P \vee Q) \in F_V$ .
- $(P \lor Q)$  should be true if P, Q or both P and Q are true.
- Inclusive or!
- Note: P and Q can be equal! P, Q are meta-symbols.

- If P and Q are wffs, then  $(P \lor Q)$  is a wff.
- If  $\{P,Q\} \subseteq F_V$ , then  $(P \lor Q) \in F_V$ .
- $(P \lor Q)$  should be true if P, Q or both P and Q are true.
- Inclusive or!
- Note: P and Q can be equal! P, Q are meta-symbols.

- If P and Q are wffs, then  $(P \lor Q)$  is a wff.
- If  $\{P,Q\} \subseteq F_V$ , then  $(P \lor Q) \in F_V$ .
- $(P \lor Q)$  should be true if P, Q or both P and Q are true.
- Inclusive or!
- Note: P and Q can be equal! P, Q are meta-symbols.

- If P and Q are wffs, then  $(P \lor Q)$  is a wff.
- If  $\{P,Q\} \subseteq F_V$ , then  $(P \lor Q) \in F_V$ .
- $(P \lor Q)$  should be true if P, Q or both P and Q are true.
- Inclusive or!
- Note: P and Q can be equal! P, Q are meta-symbols.

- If P and Q are wffs, then  $(P \lor Q)$  is a wff.
- If  $\{P,Q\} \subseteq F_V$ , then  $(P \lor Q) \in F_V$ .
- $(P \lor Q)$  should be true if P, Q or both P and Q are true.
- Inclusive or!
- Note: P and Q can be equal! P, Q are meta-symbols.

- If P and Q are wffs, then  $(P \rightarrow Q)$  is a wff.
- If  $\{P,Q\} \subseteq F_V$ , then  $(P \to Q) \in F_V$ .
- $(P \rightarrow Q)$  should be true if Q is true whenever P is true.
- Sometimes written as ⊃.
- Note: P and Q can be equal! P, Q are meta-symbols.

- If P and Q are wffs, then  $(P \rightarrow Q)$  is a wff.
- If  $\{P,Q\} \subseteq F_V$ , then  $(P \rightarrow Q) \in F_V$ .
- $(P \rightarrow Q)$  should be true if Q is true whenever P is true.
- Sometimes written as ⊃.
- Note: P and Q can be equal! P, Q are meta-symbols.

- If P and Q are wffs, then  $(P \rightarrow Q)$  is a wff.
- If  $\{P,Q\} \subseteq F_V$ , then  $(P \to Q) \in F_V$ .
- $(P \rightarrow Q)$  should be true if Q is true whenever P is true.
- Sometimes written as ⊃.
- Note: P and Q can be equal! P, Q are meta-symbols.

- If P and Q are wffs, then  $(P \rightarrow Q)$  is a wff.
- If  $\{P,Q\} \subseteq F_V$ , then  $(P \to Q) \in F_V$ .
- $(P \rightarrow Q)$  should be true if Q is true whenever P is true.
- Sometimes written as ⊃.
- Note: P and Q can be equal! P, Q are meta-symbols.

- If P and Q are wffs, then  $(P \rightarrow Q)$  is a wff.
- If  $\{P,Q\} \subseteq F_V$ , then  $(P \to Q) \in F_V$ .
- $(P \rightarrow Q)$  should be true if Q is true whenever P is true.
- Sometimes written as ⊃.
- Note: P and Q can be equal! P, Q are meta-symbols.

- If P and Q are wffs, then  $(P \leftrightarrow Q)$  is a wff.
- If  $\{P,Q\} \subseteq F_V$ , then  $(P \leftrightarrow Q) \in F_V$ .
- $(P \leftrightarrow Q)$  should be true if P has the same truth value as Q.
- Note: P and Q can be equal! P, Q are meta-symbols.

- If P and Q are wffs, then  $(P \leftrightarrow Q)$  is a wff.
- If  $\{P,Q\} \subseteq F_V$ , then  $(P \leftrightarrow Q) \in F_V$ .
- $(P \leftrightarrow Q)$  should be true if P has the same truth value as Q.
- Note: *P* and *Q* can be equal! *P*, *Q* are meta-symbols.

- If P and Q are wffs, then  $(P \leftrightarrow Q)$  is a wff.
- If  $\{P,Q\} \subseteq F_V$ , then  $(P \leftrightarrow Q) \in F_V$ .
- $(P \leftrightarrow Q)$  should be true if P has the same truth value as Q.
- Note: P and Q can be equal! P, Q are meta-symbols.

- If P and Q are wffs, then  $(P \leftrightarrow Q)$  is a wff.
- If  $\{P,Q\} \subseteq F_V$ , then  $(P \leftrightarrow Q) \in F_V$ .
- $(P \leftrightarrow Q)$  should be true if P has the same truth value as Q.
- Note: *P* and *Q* can be equal! *P*, *Q* are meta-symbols.

#### Compressed

 $P \in F_V$  if and only if

- $P \in V$  or
- $P = \top$  or
- $P = \bot$  or
- $P = (\neg Q)$  where  $Q \in F_V$  or
- $P = (Q \land R)$  where  $Q, R \in F_V$  or
- $P = (Q \lor R)$  where  $Q, R \in F_V$  or
- $P = (Q \rightarrow R)$  where  $Q, R \in F_V$  or
- $P = (Q \leftrightarrow R)$  where  $Q, R \in F_V$

Note: P, Q, R are meta-symbols.

#### Grammar

- Terminals:  $V \cup \{\top, \bot\} \cup \{\neg, \land, \lor, \rightarrow, \leftrightarrow\} \cup \{(,)\}$
- Nonterminal: F<sub>V</sub>
- $F_V \longrightarrow v \in V \mid \top \mid \bot$
- $F_V \longrightarrow (\neg F_V)$
- $F_V \longrightarrow (F_V \wedge F_V)$
- $F_V \longrightarrow (F_V \vee F_V)$
- $F_V \longrightarrow (F_V \rightarrow F_V)$
- $F_V \longrightarrow (F_V \leftrightarrow F_V)$

# Language Elements

- V: propositional variables or atoms
- $\top, \bot, \neg, \land, \lor, \rightarrow, \leftrightarrow$ : logical connectives
- (,): auxiliary symbols

### Formulas as Trees

#### Every wff can be written as a formula tree:

$$\neg A \lor B \rightarrow \neg A \land C$$

$$(((\neg A) \lor B) \to ((\neg A) \land C))$$

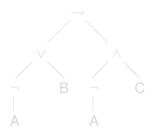

### Formulas as Trees

#### Every wff can be written as a formula tree:

$$\neg A \lor B \rightarrow \neg A \land C$$

$$(((\neg A) \lor B) \to ((\neg A) \land C))$$

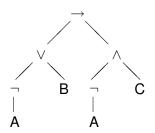

### Formulas as Trees

#### Every wff can be written as a formula tree:

$$\neg \textit{A} \lor \textit{B} \to \neg \textit{A} \land \textit{C}$$

$$(((\neg A) \vee B) \rightarrow ((\neg A) \wedge C))$$

### Subformulas

- Immediate Subformula of a wff P (isf(P)):
  - $P_0$  if  $P = \neg P_0$
  - $P_0$  if  $P = P_0 \circ P_1$  for  $\circ \in \{\land, \lor, \rightarrow, \leftrightarrow\}$
  - $P_1$  if  $P = P_0 \circ P_1$  for  $\circ \in \{\land, \lor, \rightarrow, \leftrightarrow\}$
- Subformula of a wff P (sf(P)):
  - P itself
  - If  $P_s \in sf(P)$  then  $isf(P_s) \subseteq sf(P)$ .
  - The minimal set satisfying these conditions.

### Truth valuation

- Truth values are 1 (true) and 0 (false).
- Given a set of propositional variables *V*,
- a (truth) valuation is a function  $\nu$ :  $V \mapsto \{0, 1\}$ .
- So for each  $A \in V$ , either  $\nu(A) = 1$  or  $\nu(A) = 0$ , not both.
- Now: Extend  $\nu$  (for atoms) to  $\nu^*$  (for wffs).

#### Truth valuation

- Truth values are 1 (true) and 0 (false).
- Given a set of propositional variables V,
- a (truth) valuation is a function  $\nu$ :  $V \mapsto \{0, 1\}$ .
- So for each  $A \in V$ , either  $\nu(A) = 1$  or  $\nu(A) = 0$ , not both.
- Now: Extend  $\nu$  (for atoms) to  $\nu^*$  (for wffs).

#### Truth valuation

- Truth values are 1 (true) and 0 (false).
- Given a set of propositional variables V,
- a (truth) valuation is a function  $\nu$ :  $V \mapsto \{0, 1\}$ .
- So for each  $A \in V$ , either  $\nu(A) = 1$  or  $\nu(A) = 0$ , not both.
- Now: Extend  $\nu$  (for atoms) to  $\nu^*$  (for wffs).

#### Truth valuation

- Truth values are 1 (true) and 0 (false).
- Given a set of propositional variables V,
- a (truth) valuation is a function  $\nu$ :  $V \mapsto \{0, 1\}$ .
- So for each  $A \in V$ , either  $\nu(A) = 1$  or  $\nu(A) = 0$ , not both.
- Now: Extend  $\nu$  (for atoms) to  $\nu^*$  (for wffs).

# Simple Formulas

• 
$$\nu^*(\top) = 1$$

• 
$$\nu^*(\bot) = 0$$

- Always the same for any  $\nu$ .
- If  $A \in V$ , then  $\nu^*(A) = \nu(A)$ .

#### Simple Formulas

• 
$$\nu^*(\top) = 1$$

• 
$$\nu^*(\bot) = 0$$

- Always the same for any  $\nu$ .
- If  $A \in V$ , then  $\nu^*(A) = \nu(A)$ .

## Simple Formulas

• 
$$\nu^*(\top) = 1$$

• 
$$\nu^*(\bot) = 0$$

- Always the same for any  $\nu$ .
- If  $A \in V$ , then  $\nu^*(A) = \nu(A)$ .

#### Negation

- $\neg P$  (where P is a wff)
- $\neg P$  should always have the opposite truth value of P.

• 
$$\nu^*(\neg P) = 1$$
 if (and only if)  $\nu^*(P) = 0$ 

• 
$$\nu^*(\neg P) = 0$$
 if (and only if)  $\nu^*(P) = 1$ 

P	$\neg P$
0	1
1	0

#### Negation

- $\neg P$  (where P is a wff)
- $\neg P$  should always have the opposite truth value of P.

• 
$$\nu^*(\neg P) = 1$$
 if (and only if)  $\nu^*(P) = 0$ 

• 
$$\nu^*(\neg P) = 0$$
 if (and only if)  $\nu^*(P) = 1$ 

P	$\neg P$
0	1
1	0

#### Negation

- $\neg P$  (where P is a wff)
- $\neg P$  should always have the opposite truth value of P.

• 
$$\nu^*(\neg P) = 1$$
 if (and only if)  $\nu^*(P) = 0$

#### Equivalence

- Two wffs P, Q are equivalent if for each interpretation I(P) = I(Q).
- Two wffs P, Q are equivalent if P and Q have the same models.
- Two wffs P, Q are equivalent if  $P \leftrightarrow Q$  is valid.
- Denote equivalence of P and Q as  $P \equiv Q$ .

## Equivalence

- Two wffs P, Q are equivalent if for each interpretation I I(P) = I(Q).
- Two wffs P, Q are equivalent if P and Q have the same models.
- Two wffs P, Q are equivalent if  $P \leftrightarrow Q$  is valid.

### Equivalence

- $P \equiv Q$  holds if  $P \leftrightarrow Q$  is valid.
- To check whether  $P \equiv Q$  holds:
- Check whether  $\neg(P \leftrightarrow Q)$  is satisfiable.
- If yes,  $P \equiv Q$  does not hold
- If no,  $P \equiv Q$  holds.

#### Equivalence

- $P \equiv Q$  holds if  $P \leftrightarrow Q$  is valid.
- To check whether  $P \equiv Q$  holds:
- Check whether  $\neg (P \leftrightarrow Q)$  is satisfiable.
- If yes,  $P \equiv Q$  does not hold
- If no,  $P \equiv Q$  holds.

### Equivalence

- $P \equiv Q$  holds if  $P \leftrightarrow Q$  is valid.
- To check whether  $P \equiv Q$  holds:
- Check whether  $\neg(P \leftrightarrow Q)$  is satisfiable.
- If yes,  $P \equiv Q$  does not hold
- If no,  $P \equiv Q$  holds.

- $P \models Q$  holds if  $P \rightarrow Q$  is valid (Deduction Theorem).
- To check whether  $P \models Q$  holds:
- Check whether  $\neg(P \rightarrow Q)$  is satisfiable.
- If yes,  $P \models Q$  does not hold
- If no,  $P \models Q$  holds.

#### Entailment

- $P \models Q$  holds if  $P \rightarrow Q$  is valid (Deduction Theorem).
- To check whether  $P \models Q$  holds:
- Check whether  $\neg(P \rightarrow Q)$  is satisfiable.
- If yes,  $P \models Q$  does not hold
- If no,  $P \models Q$  holds.

#### Entailment

- $P \models Q$  holds if  $P \rightarrow Q$  is valid (Deduction Theorem).
- To check whether P ⊨ Q holds:
- Check whether  $\neg(P \rightarrow Q)$  is satisfiable.
- If yes,  $P \models Q$  does not hold
- If no,  $P \models Q$  holds.

- For wffs P, Q, R:
- P[R/Q] denotes the formula in which all occurrences of Q are replaced by R
- Example:  $P_1 = (A \rightarrow B) \land (B \rightarrow A)$
- $Q_1 = A \to B, R_1 = \neg A \lor B$
- $P_1[R_1/Q_1] = (\neg A \lor B) \land (B \to A)$
- Example:  $P_2 = (A \rightarrow B) \land (A \rightarrow B)$
- $Q_2 = A \rightarrow B$ ,  $R_2 = \neg A \lor B$
- $P_2[R_2/Q_2] = (\neg A \lor B) \land (\neg A \lor B)$

- For wffs P, Q, R:
- P[R/Q] denotes the formula in which all occurrences of Q are replaced by R
- Example:  $P_1 = (A \rightarrow B) \land (B \rightarrow A)$
- $Q_1 = A \to B, R_1 = \neg A \lor B$
- $P_1[R_1/Q_1] = (\neg A \lor B) \land (B \to A)$
- Example:  $P_2 = (A \rightarrow B) \land (A \rightarrow B)$
- $Q_2 = A \rightarrow B$ ,  $R_2 = \neg A \lor B$
- $P_2[R_2/Q_2] = (\neg A \lor B) \land (\neg A \lor B)$

- For wffs P, Q, R:
- P[R/Q] denotes the formula in which all occurrences of Q are replaced by R
- Example:  $P_1 = (A \rightarrow B) \land (B \rightarrow A)$
- $Q_1 = A \to B, R_1 = \neg A \lor B$
- $P_1[R_1/Q_1] = (\neg A \lor B) \land (B \to A)$
- Example:  $P_2 = (A \rightarrow B) \land (A \rightarrow B)$
- $Q_2 = A \to B, R_2 = \neg A \lor B$
- $P_2[R_2/Q_2] = (\neg A \lor B) \land (\neg A \lor B)$

- For wffs P, Q, R:
- P[R/Q] denotes the formula in which all occurrences of Q are replaced by R
- Example:  $P_1 = (A \rightarrow B) \land (B \rightarrow A)$
- $Q_1 = A \to B, R_1 = \neg A \lor B$
- $P_1[R_1/Q_1] = (\neg A \lor B) \land (B \to A)$
- Example:  $P_2 = (A \rightarrow B) \land (A \rightarrow B)$
- $Q_2 = A \to B, R_2 = \neg A \lor B$
- $P_2[R_2/Q_2] = (\neg A \lor B) \land (\neg A \lor B)$

- For wffs P, Q, R:

- Example:  $P_1 = (A \rightarrow B) \land (B \rightarrow A)$
- $Q_1 = A \to B, R_1 = \neg A \lor B$
- $P_1[R_1/Q_1] = (\neg A \lor B) \land (B \to A)$
- Example:  $P_2 = (A \rightarrow B) \land (A \rightarrow B)$
- $Q_2 = A \to B, R_2 = \neg A \lor B$
- $P_2[R_2/Q_2] = (\neg A \lor B) \land (\neg A \lor B)$

#### Substitution Theorem

#### Theorem

For wffs P, Q, R, where  $Q \equiv R$ , we obtain  $P \equiv P[R/Q]$ 

#### Proof.

By induction over the formula structure.

• Example: 
$$\neg(A \land B) \rightarrow C$$

$$\neg (A \land B) \equiv \neg A \lor \neg B$$

$$\bullet \neg (A \land B) \rightarrow C \equiv (\neg A \lor \neg B) \rightarrow C$$

#### Substitution Theorem

#### Theorem

For wffs P, Q, R, where  $Q \equiv R$ , we obtain  $P \equiv P[R/Q]$ 

#### Proof.

By induction over the formula structure.

• Example: 
$$\neg(A \land B) \rightarrow C$$

$$\neg (A \land B) \equiv \neg A \lor \neg B$$

#### Substitution Theorem

#### Theorem

For wffs P, Q, R, where  $Q \equiv R$ , we obtain  $P \equiv P[R/Q]$ 

#### Proof.

By induction over the formula structure.

$$\neg (A \land B) \equiv \neg A \lor \neg B$$

- Can we find a formula structure, such that any wff is equivalent to a formula of this structure?

## Simplify Formulas

- Many connectives:  $\top$ ,  $\bot$ ,  $\neg$ ,  $\wedge$ ,  $\vee$ ,  $\rightarrow$ ,  $\leftrightarrow$
- Diverse structure
- Can we find a subset of connectives *C*, such that any wff is equivalent to a formula with connectives of *C*?
- Can we find a formula structure, such that any wff is equivalent to a formula of this structure?

## **Eliminating Connectives**

- Consider only ¬, ∧, ∨!
- $\top \equiv \neg A \lor A$  (We need at least one variable for this!)
- $\perp \equiv \neg A \land A$  (We need at least one variable for this!)
- $P \rightarrow Q \equiv \neg P \lor Q$
- $P \leftrightarrow Q \equiv (P \rightarrow Q) \land (Q \rightarrow P) \equiv (\neg P \lor Q) \land (\neg Q \lor P)$
- Use repeated formula substitution to eliminate other connectives.
- Every formula is equivalent to one containing only connectives ¬, ∧, ∨.

## **Eliminating Connectives**

- Consider only  $\neg$ ,  $\land$ ,  $\lor$ !
- $\top \equiv \neg A \lor A$  (We need at least one variable for this!)
- $\perp \equiv \neg A \land A$  (We need at least one variable for this!)
- $P \rightarrow Q \equiv \neg P \lor Q$
- $\bullet \ P \leftrightarrow Q \equiv (P \rightarrow Q) \land (Q \rightarrow P) \equiv (\neg P \lor Q) \land (\neg Q \lor P)$
- Use repeated formula substitution to eliminate other connectives.
- Every formula is equivalent to one containing only connectives ¬, ∧, ∨.

## **Eliminating Connectives**

- Consider only ¬, ∧, ∨!
- $\top \equiv \neg A \lor A$  (We need at least one variable for this!)
- $\perp \equiv \neg A \land A$  (We need at least one variable for this!)
- $P \rightarrow Q \equiv \neg P \lor Q$
- $\bullet \ P \leftrightarrow Q \equiv (P \to Q) \land (Q \to P) \equiv (\neg P \lor Q) \land (\neg Q \lor P)$
- Use repeated formula substitution to eliminate other connectives.
- Every formula is equivalent to one containing only connectives ¬, ∧, ∨.

- Conjunctive Normal Form (CNF)
  - $C_1 \wedge C_2 \wedge \ldots \wedge C_n$
  - Each conjunct or clause  $C_i$  is of the form  $L_1 \vee L_2 \vee ... \vee L_{m_i}$ .
  - Each literal  $L_{i_j}$  is a variable A or the negation of a variable  $\neg A$ .
- 2 Disjunctive Normal Form (DNF)
  - $D_1 \vee D_2 \vee \ldots \vee D_n$
  - Each disjunct  $D_i$  is of the form  $L_1 \wedge L_2 \wedge \ldots \wedge L_{m_i}$ .
  - Each literal  $L_{i_j}$  is a variable A or the negation of a variable  $\neg A$ .

#### Outline

- Properties
  - Validity, Satisfiability
  - Equivalence
  - Entailment
  - Validity, Equivalence, Entailment as (Un)Satisfiability
- Normal Forms
  - Why Normal Forms?
  - Conjunctive Normal Form
  - Disjunctive Normal Form
- Computation

#### **CNF** Transformation

- **1** Eliminate  $\top$ ,  $\bot$ ,  $\rightarrow$ ,  $\leftrightarrow$ .
- 2 Apply De Morgan equivalences:

$$\neg (P \lor Q) \equiv \neg Q \land \neg P$$

• 
$$\neg (P \land Q) \equiv \neg Q \lor \neg P$$

- Apply double negation equivalences:
  - ¬¬P ≡ P
- Apply Distributivity equivalence:

• 
$$P \lor (Q \land R) \equiv (P \lor Q) \land (P \lor R)$$

Order of 2-4 does not matter!

#### **Example CNF Transformation**

- $\neg((A \rightarrow B) \land (B \leftrightarrow C))$
- $(A \lor B \lor C) \land (A \lor \neg C \lor C) \land (A \lor B \lor \neg B) \land (A \lor \neg C \lor \neg B) \land (\neg B \lor B \lor C) \land (\neg B \lor \neg C \lor C) \land (\neg B \lor B \lor \neg B) \land (\neg B \lor \neg C \lor \neg B)$
- • (eliminate clauses containing P and ¬P, those are equivalent to ⊤ and are hence neutral for ∧)
- $(A \lor B \lor C) \land (A \lor \neg C \lor \neg B) \land (\neg B \lor \neg C)$

### **Example CNF Transformation**

- $\bullet (A \lor B \lor C) \land (A \lor \neg C \lor C) \land (A \lor B \lor \neg B) \land (A \lor \neg C \lor \neg B) \land (\neg B \lor B \lor C) \land (\neg B \lor \neg C \lor C) \land (\neg B \lor B \lor \neg B) \land (\neg B \lor \neg C \lor \neg B)$
- • (eliminate clauses containing P and ¬P, those are equivalent to ⊤ and are hence neutral for ∧)
- $(A \lor B \lor C) \land (A \lor \neg C \lor \neg B) \land (\neg B \lor \neg C)$

#### **CNF** Representation

- $(L_{1_1} \lor L_{2_1} \lor \ldots \lor L_{m_1}) \land (L_{1_2} \lor L_{2_2} \lor \ldots \lor L_{m_2}) \land \ldots \land (L_{1_n} \lor L_{2_n} \lor \ldots \lor L_{m_n})$
- It is clear where which connectives are, so write it as a set of clauses.
- Write clauses as sets of literals.
- Write CNFs as a set of sets of literals:

• 
$$\{\{L_{1_1}, L_{2_1}, \dots, L_{m_1}\}, \{L_{1_2}, L_{2_2}, \dots, L_{m_2}\}, \dots, \{L_{1_n}, L_{2_n}, \dots, L_{m_n}\}\}$$

#### Outline

- Properties
  - Validity, Satisfiability
  - Equivalence
  - Entailment
  - Validity, Equivalence, Entailment as (Un)Satisfiability
- Normal Forms
  - Why Normal Forms?
  - Conjunctive Normal Form
  - Disjunctive Normal Form
- 6 Computation

#### **DNF** Transformation

- **1** Eliminate  $\top$ ,  $\bot$ ,  $\rightarrow$ ,  $\leftrightarrow$ .
- 2 Apply double negation equivalence:

$$\neg \neg P \equiv P$$

Apply De Morgan equivalences:

• 
$$\neg (P \lor Q) \equiv \neg P \land \neg Q$$

• 
$$\neg (P \land Q) \equiv \neg P \lor \neg Q$$

Apply Distributivity equivalence:

• 
$$P \wedge (Q \vee R) \equiv (P \wedge Q) \vee (P \wedge R)$$

Order of 2-4 does not matter!

Order of 2-4 does not matter!

# Satisfiability: Complexity

#### Theorem (Cook 1971)

#### Satisfiability of wffs is NP-complete

- First NP-completeness proof ever!
- Membership: Guess an interpretation I (from  $2^n$  possibilities, for n variables), verify in polynomial time that  $I \models \phi$ .
- Hardness: Simulate nondeterministic Turing machine with polynomial time bound.

# Satisfiability: Complexity

#### Theorem (Cook 1971)

Satisfiability of wffs is NP-complete

- First NP-completeness proof ever!
- Membership: Guess an interpretation I (from  $2^n$  possibilities, for n variables), verify in polynomial time that  $I \models \phi$ .
- Hardness: Simulate nondeterministic Turing machine with polynomial time bound.

### Satisfiability: Methods

- Truth Table
- DLL
- Resolution
- Tableaux
- . . . .

Many require CNF input
