

Remote Sensing: Why?

Daniele Cerra, German Aerospace Center (DLR)

Knowledge for Tomorrow

What is remote sensing?

Remote sensing is a technology that measures electromagnetic radiation to extract information on this Earth's land surface, sea, and atmosphere.

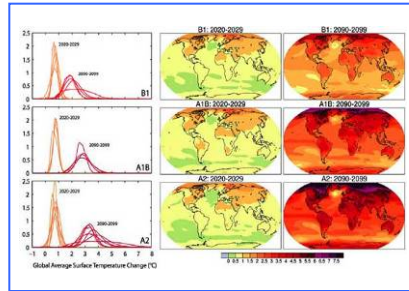

- Dr. Nicholas Short

Remote Sensing gives Valuable Information for...

Earth system and environmental sciences

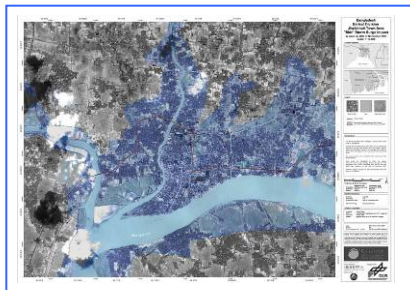

Global change research

Geostationary Satellites

A geostationary satellite is one of the satellites which is getting remote sense data and located satellite at an altitude of approximately 36000 kilometres and directly over the equator.

Earth observation

Earth Observation Center, EOC

Core of DLR's remote sensing activities

- ca. 330 employees in 2 research institutes and 12 departments at 3 sites
- ca. 30 employees in 2 University Departments
- ca. 250 scientists from more than 25 nations
- ca. 60 PhD students
- ca. 20 guest scientists
- ca. 45% third party funding

Earth Observation Center - Core Duties

Ground Segment

DFD

Acquisition, processing, archiving, distribution of Earth observation data and derived Information

Algorithms & Processors

IMF

R &D on algorithms and processors to derive and improve geophysical parameters from satellite data in 2-, 3- and 4 dimensions

Science and Applications

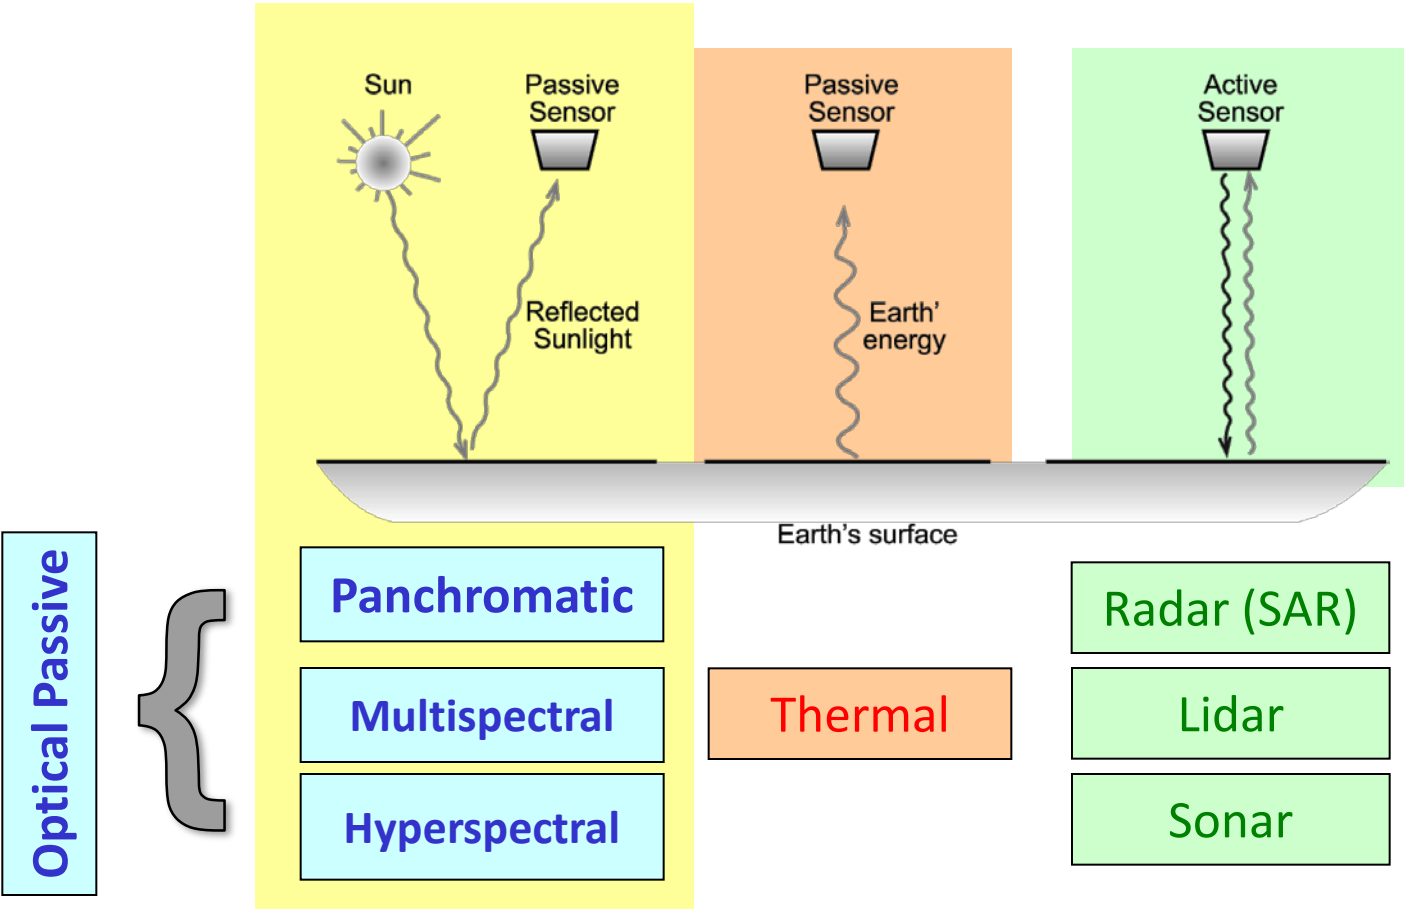

DFD

Geoscientific research, development of geo-information products, research projects
